Terms & conditions for open-source software components

§1 General

1.1 Valid date
Valid from May 1st, 2022, and replaces any previous versions.

1.2 Information about open-source
Holm Security Denmark ApS (corporate identity number 43160079) ("Holm Security") provides Services within IT security. Holm Security has incorporated open-source components in the software underlying its Services. These open-source components are governed by and licensed under the applicable open-source licensing terms and conditions which take precedence over the Holm Security general terms and conditions. Below is a description of the open-source components used in Holm Security's software and their respective license terms, as well as information on how you may obtain the source code to the open-source components.

1.3 What does it mean for us as a customer that the services include open-source?
The use of open-source components in the software does not impact the way you as a customer may use the Services. On the contrary, the transparency that comes with incorporating well-built and thoroughly tested open-source components help improve the overall software security. Further, Holm Security believes that, by contributing to these open-source components we help create a safer environment for many organizations.

§2 Open-source components included & applicable license terms

2.1 gvmd:
- Used in: System & Network Scanning
- Copyright: Greenbone Networks GmbH
- Information about the open-source component and access to the source code: https://github.com/greenbone/gvmd
- Licensed under: Affero General Public License version 3.0

2.2 openvas-scanner:
- Used in: System & Network Scanning
- Copyright: Greenbone Networks GmbH
- Information about the open-source component and access to the source code: https://github.com/greenbone/openvas-scanner
- Licensed under: General Public License version 2.0

2.3 ospd-openvas:
- Used in: System & Network Scanning
- Copyright: Greenbone Networks GmbH
- Information about the open-source component and access to the source code: https://github.com/greenbone/ospd-openvas
- Licensed under: Affero General Public License version 3.0

2.4 ospd:
- Used in: System & Network Scanning
- Copyright: Greenbone Networks GmbH
- Information about the open-source component and access to the source code: https://github.com/greenbone/ospd
- Licensed under: Affero General Public License version 3.0

2.5 python-gvm
- Used in: System & Network Scanning
- Copyright: Greenbone Networks GmbH
- Information about the open-source component and access to the source code: https://github.com/greenbone/python-gvm/blob/master/LICENSE
- Licensed under: General Public License version 3.0

- Used in: Cloud Scanning
- Information about the open-source component and access to the source code: https://github.com/aquasecurity/cloudsploit
- Licensed under: General Public License version 3.0

§3 Holm Security's own modifications & developments of open-source components

3.1 General information
Holm Security has developed certain software that constitute modifications and developments of the above listed open-source components, to which Holm Security holds the copyright and that are also, in consequence, governed by the applicable open-source license terms.

You are entitled to obtain the source code of certain Holm Security developed software and use them outside of the Services in accordance with the applicable open-source license terms.

If you wish to receive the open-source software source code developed by Holm Security, please send us an enquiry to info@holmsecurity.com, including your company name, and we will provide you with source code that you are entitled to and the applicable open-source license terms.
